

CONSTRUCTION SERVICES

SDE offers a broad range of construction services from the time of bidding a project until project closeout. We have provided these services for new building construction, building additions and renovations; as well as, transportation, utilities, environmental, water/wastewater treatment plant, and recreational projects. Competent and thorough inspection is one of the most important elements in achieving a successful project. In addition to providing the necessary administrative tasks, construction management requires sound judgment, diplomacy, procedural knowledge, effective inspection techniques, and complete and accurate documentation. We have seasoned professional engineers and trained, professional inspectors that collaborate during the construction process to make sure that each project meets regulatory requirements and the owner's satisfaction.

SERVICES
